

BUILT TO LOCK-UP BY INTEGRITY

YOUR HOME. WHEN AND WHERE YOU WANT.

Integrity's newest residential offering provides flexibility and efficiency in construction, when compared to traditional construction methods. Our built to lock-up, slab-on-grade residential models are a great value-added choice for those who are comfortable general contracting their own project and do not require a basement. The structure is much quicker to build than traditional methods, without sacrificing quality.

LOCK-UP

Built to Lock-Up by Integrity provides you a completed structure including walls, roof, windows and doors. Both our Post-Frame and Post & Beam construction methods add speed and value helping to make this an economical and efficient choice, providing project management flexibility and cost-savings for those who are ready to build. Included in our package price is professional design and engineering, with a range of options and upgrades, as well as the interior floor plan. Our qualified construction teams can mobilize across Western Canada, allowing us to service both central and more remote locations.

There are many factors that can impact the total build time, including seasonal variances, but typically Integrity can take a building from the start of construction to lock-up stage (exterior structure) in as little as 3 to 4 weeks. With Integrity, you save time during the exterior framing, roofing and sheathing stages of your build. This means you have the opportunity to be in your new house sooner.

Once the lock-up phase of construction is complete, you will be able to engage other trades to complete the remaining aspects of your new home.

INTEGRITY BUILT TO LOCK-UP

Integrity's Built to Lock-Up offering includes foundation, exterior framing, sheathing, roof and exterior finishing (optional). You can expect our stage of the construction to be completed in 3-4 weeks, saving you time in the overall length of the project.

SLAB-ON-GRADE

Slab-on-grade is a very simple idea. Instead of excavating and emptying an average of 3 cement trucks to pour a basement foundation, footing, and walls, a slab foundation only requires you to level the ground your home will be sitting on. The concrete floor of your house is then poured after construction. With slab-on-grade construction, in-floor heating is a cost-efficient way to heat your home. It is perfect for those who do not require a basement.

BUILT TO LOCK-UP BY INTEGRITY

OWNER BUILDER PERMIT AND NEW HOME WARRANTY

When deciding to be the Owner/Builder of your own home, there are a few things that you need to do to comply with provincial regulations. There are different regulations for each province in Western Canada, including what is required for New Home Warranty.

Below are some helpful links to the provincial requirements for New Home Warranty and Owner/Builder permits:

- BC - <https://www.bchousing.org/licensing-consumer-services/owner-builder/>
- Alberta - <https://www.anhwp.com/>
- Saskatchewan - <https://www.sknhwp.com/>
- Manitoba - <http://www.mbnhwp.com/>

SOME FREQUENTLY ASKED QUESTIONS

CAN I CUSTOM DESIGN MY OWN HOME?

In addition to offering a range of professionally designed models, we also offer several options and upgrades for each model to help you achieve your goals. We do not recommend this offering for those who desire to custom design a home, however limited customization is available for a fee.

DOES INTEGRITY OFFER FINANCING?

Integrity does not offer financing. Please speak with your preferred financial institution for your financing requirements.
